

Document of PointBox System Releases

10/08/2013, Zhijun Zhang

Release of PointBox Console

Release of PointBox Console

There are two types of release: (1) online update; (2) binary installer build and release on the web for public download.

Server Environments Release

There are four environments: production, backup, staging, and developer. For each environment, there will be only one "master workstation" and multiple "agent workstations". For each environment, it need to release PointBox central/local/engine/auditor onto multiple workstations. In addition, it need release PointBox controller onto master workstation. If necessary, update data for specific releases on PointBox controller.

Database Maintenance & Upgrade

There are four environments: production, backup, staging, and developer. For each environment, it includes two parts for releases: maintenance and upgrade. Maintenance includes data synchronization across different environments and backup data for different environments. Upgrade involves database schema modification and data export and import.

Production/Backup/Staging/Developer Environments
